

Position Help

Business guidance for the Position screen

Screen context	Value
Business entity	Position
Dataverse logical name	position
Domain	Organization
Ownership / sensitivity	Dataverse platform organization reference data

Purpose

Defines an organizational role that can be assigned to Employees and arranged in a Position hierarchy.

All names, dates, amounts, and identifiers in examples are fictional and intended for training.

Understanding Position

Defines an organizational role that can be assigned to Employees and arranged in a Position hierarchy.

Use this screen when

- Creating an approved organizational role
- Assigning a role to one or more Employees
- Representing parent and child organizational roles

Do not use this screen to

- Do not use Position as an Employee record
- Do not create a Position merely to hold a temporary title variation
- Do not use Position as a security role

Contextual agent grounding

When entityName is “position”, treat this document as the primary entity-specific source. Use it together with HR-Agent-Sidecar-Employee-and-Organization-Process.pdf. Do not infer that planned Model-driven App automation, security roles, or the Copilot side pane are deployed until implementation is confirmed.

Who does what

Business role	Responsibility on this screen
HR/organization administrator	Creates and maintains approved Positions.
Manager	Requests or confirms approved role assignments.

Business field guide

Field	Business meaning	How to use it
Position Name	Business name of the organizational role.	Use the approved title, such as Senior Designer.
Description	Brief explanation of the role.	Describe the role, not the current Employee.
Parent Position	Position above this Position in the hierarchy.	Use when the approved organization design has a parent role.

Field	Business meaning	How to use it
Status	Whether the Position can be used.	Deactivate obsolete Positions instead of deleting history.

Related business records

Related record	Relationship to this screen
Employee	Employees can be assigned to a Position.
Parent Position	Positions can form an organizational hierarchy.

Worked example

The following fictional Position record demonstrates a complete business scenario.

Field	Example value
Position Name	Senior Designer
Description	Leads customer-centered product design work.
Parent Position	Director of Product Design
Status	Active

Questions users commonly ask

Question	Business answer
Can more than one Employee hold the same Position?	Yes, when the organizational model treats the Position as a reusable role. Follow HR policy if positions must be unique.
Is Position the same as Department?	No. Position is a role; Department is an organizational unit.
Should I delete an old Position?	Normally no. Deactivate it so historical Employee assignments remain understandable.

Data quality and privacy checks

- Confirm that the record belongs on the Position screen and is not a duplicate or a different business concept.

- Use approved lookups and choice values instead of typing alternative labels into notes.
- Enter only the minimum personal or financial information required for the business process.
- Preserve status and historical records; do not silently overwrite completed business events.
- When escalating an issue, share the record URL/ID and field name—not unnecessary sensitive field contents.

Companion process documentation

Use this entity help together with: [HR-Agent-Sidecar-Employee-and-Organization-Process.pdf](#). The process document explains sequencing, responsibilities, approvals, exceptions, and cross-entity effects.

Agent response boundary

What the contextual agent should do

Answer in business terms for a user currently viewing Position. Explain field meaning, proper use, related records, validation, and the applicable business process. If a question requires organization-specific policy, access rights, or confirmation that automation is deployed, state that limitation and direct the user to the appropriate HR or Power Platform owner.
