

Microsoft Entra App Registration Guide

Delegated Copilot Studio access from the HR Management model-driven app

Version 1.0 | July 9, 2026 | Administrator and developer procedure

Objective

Create a single-tenant browser client registration that lets the HR Management side pane call the published Copilot Studio agent on behalf of the signed-in Microsoft user. This preserves user-scoped SharePoint access and removes the need to treat a Direct Line token as user authentication.

Security outcome

The browser receives only delegated, short-lived access tokens. No client secret is created or embedded. Copilot Studio remains configured to Authenticate with Microsoft, and SharePoint continues to enforce the signed-in user's existing permissions.

1. Configuration worksheet

Setting	Required value
Registration name	HR Management App Guide Sidecar - Dev
Supported account type	Accounts in this organizational directory only (single tenant)
Platform	Single-page application (SPA)
SPA redirect URI	https://carremacodeapps.crm.dynamics.com/WebResources/maftagsc_/copilot/authRedirect.html
Delegated API permission	Power Platform API > CopilotStudio > CopilotStudio.Copilots.Invoke
Runtime scope	https://api.powerplatform.com/CopilotStudio.Copilots.Invoke
Environment ID	f9b87f8b-0abf-e629-affb-b13195d1ed14
Agent schema name	cr0b1_HRMgmtClassic
Application (client) ID	Record after registration: _____
Directory (tenant) ID	Record after registration: _____

2. Prerequisites

- A Microsoft Entra account permitted to create app registrations.
- A tenant administrator available to grant tenant-wide consent if your role cannot do so.
- Access to the published HR Management App Guide agent in Copilot Studio.
- The target Dataverse organization URL and the agent metadata values shown above.

3. Registration procedure

1. Open Microsoft Entra admin center

1. Go to <https://entra.microsoft.com> and sign in.
2. Confirm the correct tenant is selected.
3. Navigate to Identity > Applications > App registrations.
4. Select New registration.

2. Register the browser client

5. Enter the name HR Management App Guide Sidecar - Dev.
6. Select Accounts in this organizational directory only (single tenant).
7. Under Redirect URI, select Single-page application (SPA).
8. Enter https://carremacodeapps.crm.dynamics.com/WebResources/maftagsc_/copilot/authRedirect.html exactly, then select Register.

Why SPA?

The side pane is browser-hosted. SPA registration enables authorization-code flow with PKCE. Do not register this client as a confidential Web application.

3. Record non-secret identifiers

9. On Overview, copy the Application (client) ID into the worksheet.

10. Copy the Directory (tenant) ID into the worksheet.
11. Treat both as configuration identifiers, not passwords. Never substitute the Copilot Studio Agent App ID for this client ID.

4. Verify authentication settings

12. Open Manage > Authentication.
13. Confirm a Single-page application platform exists with https://carremacodeapps.crm.dynamics.com/WebResources/maftagsc_/copilot/authRedirect.html.
14. Leave Access tokens and ID tokens under Implicit grant and hybrid flows cleared.
15. Under Advanced settings, set Allow public client flows to Yes, as required by the Microsoft reference architecture.
16. Select Save.

5. Add delegated Copilot Studio permission

17. Open Manage > API permissions and select Add a permission.
18. Select APIs my organization uses and search for Power Platform API.
19. Select Delegated permissions.
20. Expand CopilotStudio and select CopilotStudio.Copilots.Invoke.
21. Select Add permissions.

6. Grant administrator consent

22. On API permissions, select Grant admin consent for the tenant.
23. Confirm the prompt.
24. Verify the permission is Delegated and its status is Granted for the tenant.

Do not create a client secret

A browser cannot safely keep a client secret. The client uses delegated authentication, PKCE, and short-lived access tokens. Certificates & secrets should remain empty for this registration.

7. Verify the Copilot Studio agent

25. Open HR Management App Guide in Copilot Studio.
26. Under Settings > Security > Authentication, keep Authenticate with Microsoft selected.
27. Under Settings > Advanced > Metadata, confirm the Environment ID and Schema name match the worksheet.
28. From the agent overview, share chat access with the intended HR users or an Entra security group containing the test user.
29. Publish the agent if its configuration changed.

4. What the four values are used for

Value	Runtime use	Secret?
Application (client) ID	Identifies the browser client when MSAL requests a delegated Power Platform API token.	No
Directory (tenant) ID	Builds the tenant-specific Microsoft identity authority and keeps sign-in single-tenant.	No
Environment ID	Tells CopilotStudioClient which Power Platform environment hosts	No

	the agent.	
Agent schema name	Identifies the published agent supplied as agentIdentifier to CopilotStudioClient.	No

5. Developer handoff

Provide the developer these four non-secret values:

- Application (client) ID from the new registration
- Directory (tenant) ID from the new registration
- Environment ID: f9b87f8b-0abf-e629-affb-b13195d1ed14
- Agent schema name: cr0b1_HRMgmtClassic

The implementation uses them as follows:

```
MSAL clientId           = <Application (client) ID>
MSAL authority          = https://login.microsoftonline.com/<Directory (tenant) ID>
MSAL redirectUri        =
https://carremacodeapps.crm.dynamics.com/WebResources/maftagsc_/copilot/authRedirect.html
Requested delegated scope = https://api.powerplatform.com/CopilotStudio.Copilots.Invoke
Agents SDK environmentId = f9b87f8b-0abf-e629-affb-b13195d1ed14
Agents SDK agentIdentifier= cr0b1_HRMgmtClassic
```

6. Validation checklist

- ☐ The app registration is single tenant.
- ☐ The redirect URI is registered under SPA and exactly matches the dedicated Dataverse authentication redirect web resource.
- ☐ CopilotStudio.Copilots.Invoke is a delegated permission and tenant consent is granted.
- ☐ No client secret exists for the browser client.
- ☐ The agent remains set to Authenticate with Microsoft and is published.
- ☐ The test user has permission to chat with the agent.
- ☐ The test user has access to the intended SharePoint knowledge files.
- ☐ First use may show a consent or sign-in popup; subsequent token acquisition should normally be silent.
- ☐ A user without SharePoint access does not receive protected SharePoint content.

7. Troubleshooting

Symptom	Likely cause	Action
AADSTS redirect URI mismatch	The exact runtime redirect URI is not registered as SPA.	Compare scheme, hostname, path, and trailing slash; use the worksheet value exactly.
Consent required or permission missing	Delegated permission lacks administrator consent.	Grant tenant consent and verify the permission status.
No account available for silent token acquisition	The browser client has no cached account.	Use interactive popup sign-in once, then retry silent acquisition.

Agent invocation returns forbidden	Agent is not shared with the user or the wrong tenant/client is used.	Verify sharing, tenant ID, client ID, and published agent metadata.
SharePoint answer is unavailable	The user lacks SharePoint access, the source is restricted, or agent configuration is unpublished.	Verify the user's direct SharePoint access and republish the agent if needed.
